Supplementary figure 2: Short-term clonal expansion of K-ras\textsuperscript{G12D} mutated Lgr5\textsuperscript{hi} cells

A) Representation of the relative abundance (%) of clones scored for total clone size and the number of Lgr5\textsuperscript{hi} cells after 48hr. Total clone size was scored as the total number of cells within a given clone, while the stem cell content was determined as the number of Lgr5\textsuperscript{hi} cells within that clone. Left: WT clones, right: K-ras\textsuperscript{G12D} activated clones. B) Like A, but after 72hrs of tracing.
