Figure S16. Figure represents data from the 94 BRCA samples in figures 1d and 3a. (upper panel) The correlation between exon 1 smRNAs and mRNA values for differentially expressed smRNAs between matched cancer and normal samples. (middle panel) The correlation between exon 1 smRNA values in normal and the respective values in tumor for all genes with smRNA expression (p<2.2e-16). (lower panel) The same as above, but for mRNA expression values (p<2.2e-16).
