Fig S6 – Effect of muscle-specific *Ucp4C* silencing on OCR of II instar BWPs. UAS fly strain v2647 (*UAS-Ucp4C*) were used, and crossed with the 24B-Gal4 driver. (A) qRT-PCR of RNA from II instar larvae of specific controls (open column) or of interfered individuals for *Ucp4C* (closed column). (B) OCR of BWPs in *Ucp4C*-interfered larvae; where indicated (arrows) 5 μM oligomycin, 1 μM FCCP and 5 μM rotenone plus 5 μM antimycin A were added.
